# Metabolic Response to Surgery

Jonas Nygren
Dept Surgery, Ersta Hospital

## **SFAI**

Perioperative Medicine Göteborg 12/9, 2019

# Disclosures

None

# The response to major surgery leads to morbidity

#### Metabolic homeostasis

Inflammation, insulin resistance, catabolism

#### Fluid balance

Hypoperfusion, overhydration, oedemia

#### Pain

Somatic, visceral, neuropathic

### Gut dysfunction

Nausea, vomiting, paralysis

### Cognitive dysfunction

Delirium, confusion, sleep disruption

### Post-operative deconditioning

Immobilisation, fatigue, anemia, starvation

It's more to it than a perfect operation

# Metabolic response to trauma

## Neuroendocrine response

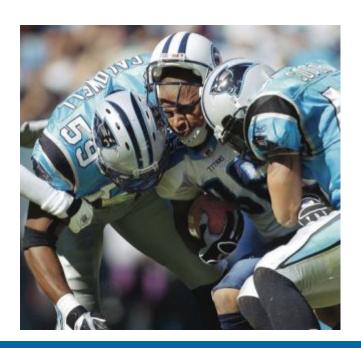

• Cortisol, catecholamines, glucagon, GH

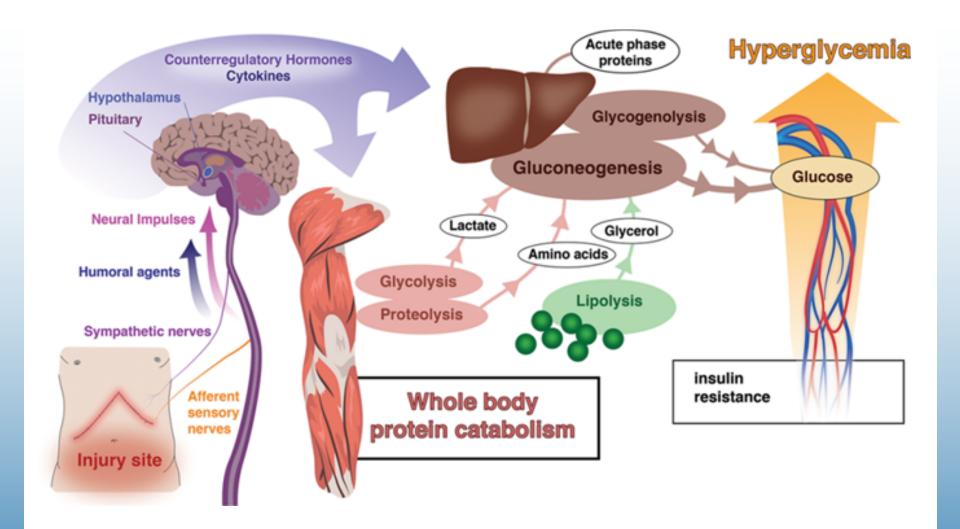

### Insulin resistance

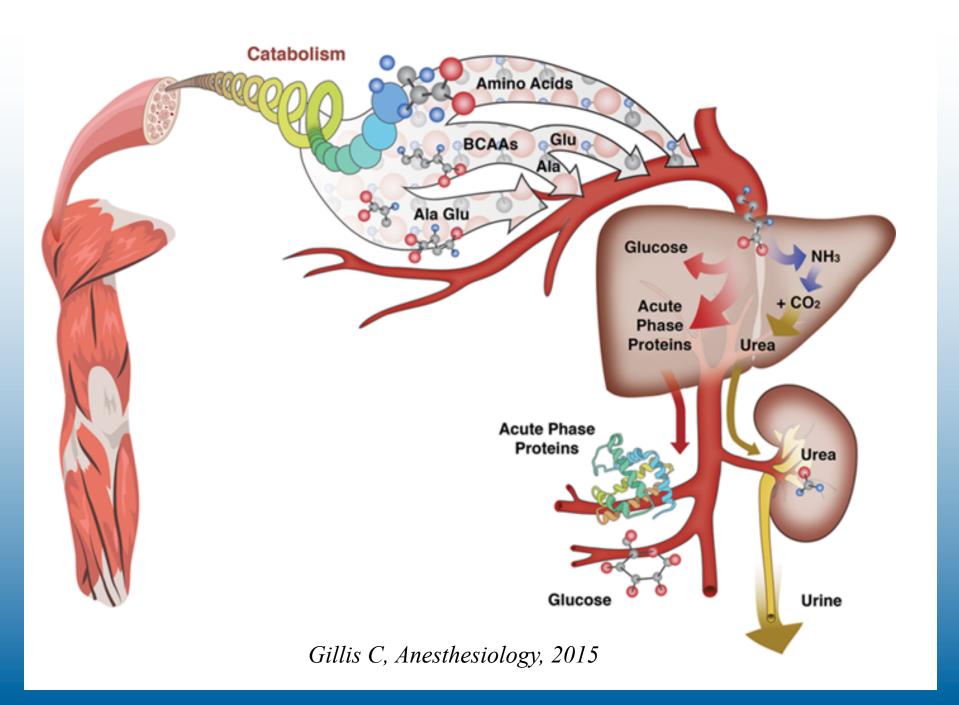

- Catabolism
- Lipolysis
- Protein breakdown
- Hyperglycemia

### Inflammation

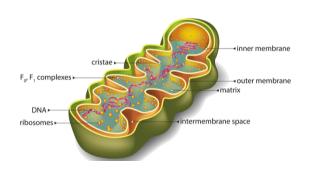

Cytokines

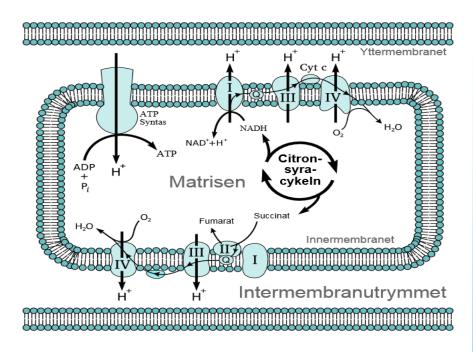

# Mitochondrial dysfunction

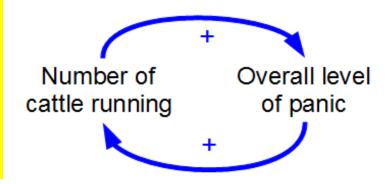

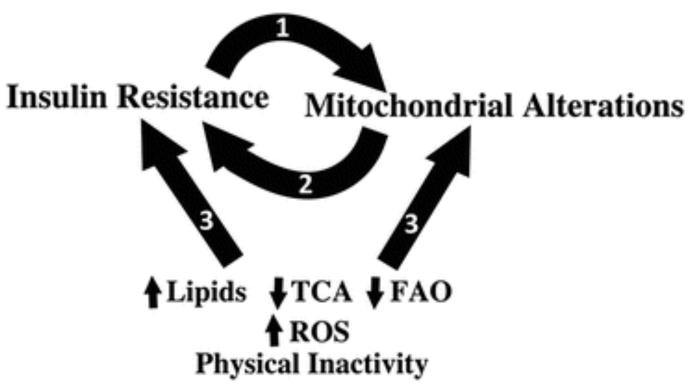

- Energy production / oxidative phosphorylation / ATP
- Decrerased fatty acid oxidation
- Inhibiting insulin action / Insulin resistance
- Toxic lipid metabolite accumulation
- ROS production / oxidative stress
- Uncoupling

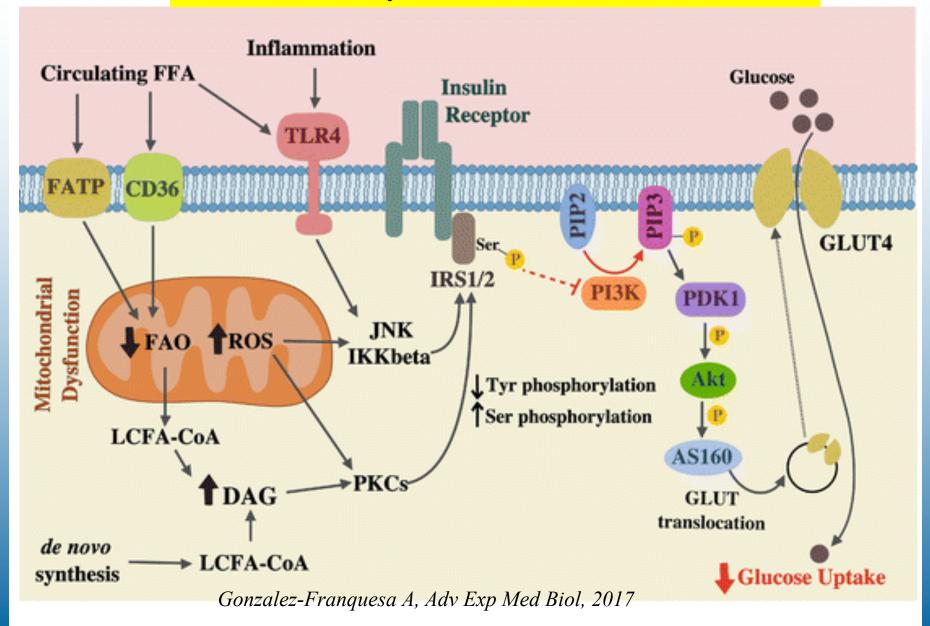

## Harmful positive feedback loop

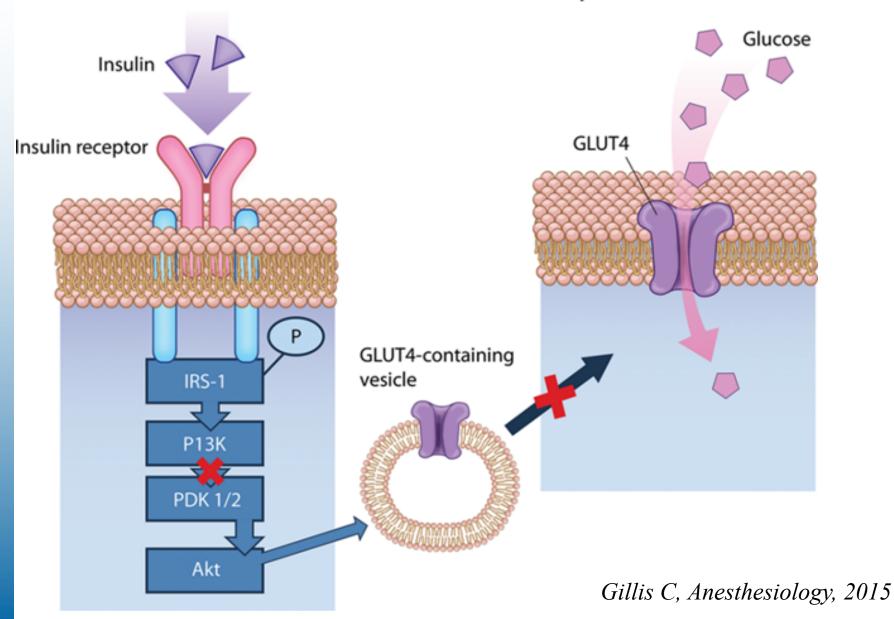

Gonzalez-Franquesa A, Adv Exp Med Biol, 2017

## Mitochondrial dysfunction and insulin resistance

## Effect of Insulin on Glucose Uptake

# Preoperative insulin resistance increased risk for complications

273 patients open cardiac surgery, insulin sensitivity determined at the end of op

Complication	OR for every decrease by 1 mg/kg/min (Insulin sensitivity)	P value
Death	2.33 (0.94-5.78)	0.067
Major complication	2.23 (1.30-3.85)	0.004
Severe infection	4.98 (1.48-16.8)	0.010
Minor infection	1.97 (1.27-3.06)	0.003

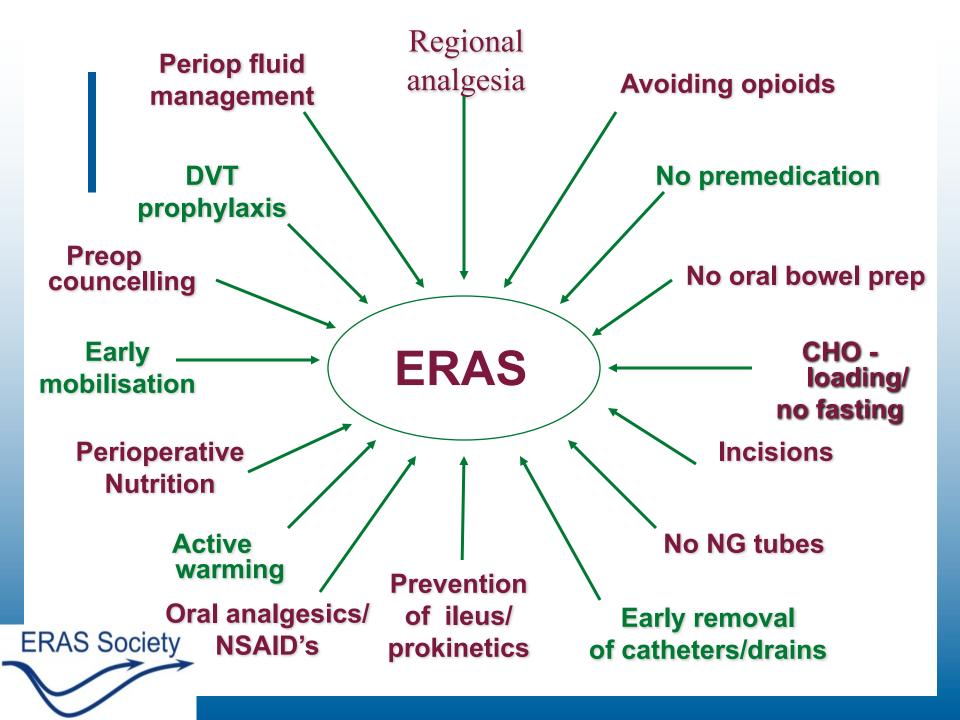

The ORs were adjusted for potential confounders

Sato et al, JCEM 2010; 95: 4338-44

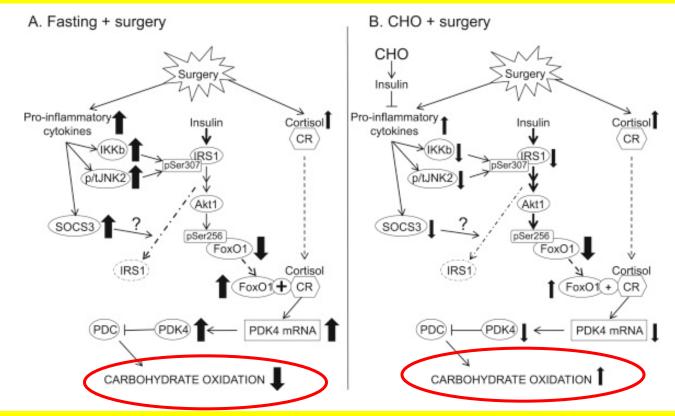

# Controlling perioperative physiology Many small pieces of the puzzle

	Hormonal	Metabolic	Inflammatory
Minimally invasive surgery	<b>✓</b>	<b>✓</b>	<b>✓</b>
Neural blockade	✓	✓	/
Opioid-sparing pain control	✓		
Prevention of hypothermia	✓	✓	
Perioperative fluid management	✓		
Anabolic agents (e.g., growth hormone)	✓	✓	
Glucocorticoids	✓	✓	✓
β-blockade	✓	✓	
α2-agonists	✓		✓
Exercise	✓	✓	✓
Carbohydrate loading	✓	✓	✓
Immunonutrition		✓	✓
Early oral nutrition	✓	/	✓
Adequate dietary protein		✓	
Insulin (glycemic control)	✓	✓	✓

# Postoperative muscle mitochondrial dysfunction improves by carbohydrate loading

### **Preoperative carbohydrate loading**

- Reduced muscle inflammatory response
- Improved inhibition of FOX01 mediated PDK4
- Supported by clinical studies
  - (Awad S, Ann Surg, 2010, Wang ZG, BJS, 2010, Yu Y, ChJS, 2013)

# **ERAS** and clinical outcome?

# Compliance to ERAS predict outcomes after colorectal cancer surgery n=953

- Predictors for improved clinical outcome
  - Preoperative carbohydrate loading
  - Perioperative fluid volume

#### Table 1 Modified fast-track care perioperative plan

#### Preoperative

Detailed information of the nature of the surgery and perioperative care

Emphasis on the plan for early discharge, specifically <2 days

\* Bowel preparation: mechanical and oral antibiotics
IV antibiotics 30 min before initiation of the procedure
Intraoperative

8-10 mg dexamethasone at induction of anesthesia Laparoscopic approach

No use of drains and tubes

No use of epidural anesthesia No use of urinary catheter for right and transverse colon resections; immediate removal of catheter after low anterior colon resections

#### Postoperative

Admission to regular nursing floor Immediate postoperative general diet that was emphasized to the nursing staff

\* Ambulation same evening of surgery

No use of patient-controlled analgesia pumps; pain control

 achieved with routine IV ketorolac and supplemented as needed with IV and oral narcotics

No use of laxatives or prokinetics

Postoperative reinforcement of discharge plan by attending surgeon

Neither flatus nor bowel movement a requirement for discharge

Patient agreement of readiness and acceptance of discharge

Follow-up evaluation at outpatient clinic within 1 wk after discharge

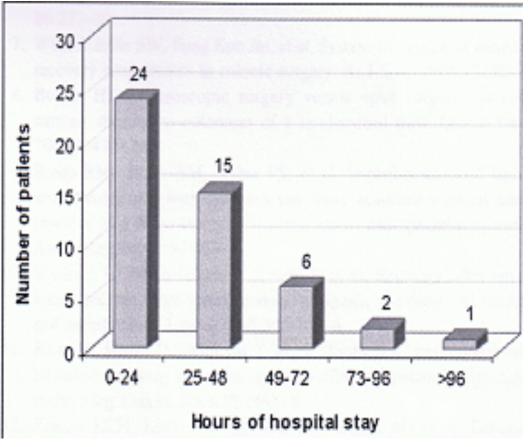

IV = intravenous.

### **ERAS**

Lap Colonic resection

FIGURE 2. Kaplan-Meier survival curves of 5-year disease-free survival in patients undergoing prehabilitation vs control for (A) all stages and (B) stage III disease.

# **Summary**

- Major surgery
  - significant morbidity and surgical stress
- ERAS are evidence based perioperative protocols
  - reduces surgical stress
  - improves postoperative outcome
- Stress reduction
  - associated to long term oncologic outcome

# The million dollar question

Postoperative insulin resistance – Good or bad ?

Beneficial when you were injured in ancient times?

	Postop	NIDDM
Hyperglycemia	+	+
Insulin sensitivity	-	-
Glucose production	+	+
Glucose uptake	-	-
GLUT4 translocation	-	-
Glycogen formation	-	-
